

Career Objective

Enthusiastic Python Developer with practical knowledge of automation, data analytics, machine learning, deep learning, and Large Language Models (LLMs). Looking for an opportunity to work on real-world software and AI-based projects while enhancing technical and problem-solving skills.

Educational Qualification :

Standard	Institute	Board / University	Percentage	Class
MCS				
BCS				
HSC				
SSC				

Technical Skills :

Programming Paradigms & Languages

- **Procedural Programming:** C
- **Object-Oriented Programming (OOP):** C++, Python
- **Virtual Machine-based Programming:** Java, C# .NET
- **Scripting Languages:** PHP, JavaScript

Domain Expertise

Programming & Development

Python Programming, Object-Oriented Programming (OOP), Data Structures, Problem Solving, Automation & Scripting

Python Libraries & Frameworks

NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, TensorFlow, Keras, OpenCV, Streamlit

Data Science & Analytics

Data Cleaning & Preprocessing, Exploratory Data Analysis (EDA), Data Visualization, Statistical Analysis, SQL-based Data Analysis

Machine Learning

Supervised & Unsupervised Learning, Regression, Classification, Clustering, Feature Engineering, Model Evaluation, Predictive Analytics

Deep Learning & AI

ANN, CNN, RNN/LSTM, Computer Vision, Natural Language Processing (NLP)

Generative AI & LLMs

Generative AI Applications, Large Language Models (LLMs), Hugging Face Transformers, GPT & BERT Models, Prompt Engineering, AI-powered Intelligent Systems

Automation Technologies

Python Automation, File Handling, Email Automation (smtplib), Scheduling, Logging, OS-Level Automation

Databases

MySQL, MongoDB

Tools & Development Environment

Git, GitHub, Jupyter Notebook, Anaconda, VS Code, Google Colab

Python Automation Project

Duplicate File Cleaner & Log Automation

Description: Developed a Python-based automation script to detect and delete duplicate files from a directory periodically. The system automatically generates log files of operations performed and shares them via email for audit purposes.

- Implemented checksum-based duplicate detection using hashlib (MD5).
- Automated log generation with timestamps for every execution.
- Used schedule library for periodic execution of duplicate file cleanup.
- Integrated email automation (smtplib) to send logs automatically.

Tech Stack: Python, OS module, Hashlib, Schedule, smtplib

🔗 **GitHub Repository:** github.com/username/-----

Marvellous Data Shield – Automated Backup & File Monitoring System

Description:

- Developed an automated file backup and monitoring system using Python to securely manage and synchronize important data directories.
- Implemented checksum (MD5 hash) based file comparison to detect newly added or modified files efficiently.
- Integrated scheduling automation for periodic backup execution and intelligent file synchronization.
- Designed a command-line utility for automated backup management with real-time reporting and archive creation.

Tech Stack:

Python, OS Module, hashlib, shutil, schedule, Automation Scripting

🔗 **GitHub Repository:** github.com/username/-----

Marvellous Platform Surveillance System

Description:

- Developed an automated system monitoring and surveillance tool using Python to track system performance and process activities.
- Implemented real-time logging of CPU usage, RAM utilization, disk statistics, network activity, and running processes using the psutil library.
- Integrated scheduling automation for periodic log generation and system monitoring.
- Designed a command-line based monitoring utility with detailed reporting for system analysis and administrative monitoring.

Tech Stack:

Python, psutil, OS Module, schedule, Automation Scripting

🔗 **GitHub Repository:** github.com/username/-----

System Process Logger with Scheduling

Description: Designed a Python automation project to periodically log details of running processes (PID, name, user, memory usage) on the system. Each execution generates a new log file with a timestamped filename for easy tracking.

- Implemented process scanning using psutil to extract process details.
- Automated log file creation with timestamps and proper formatting.
- Used the schedule library to run logging tasks periodically without manual intervention.
- Enhanced usability by allowing custom folder name & interval input.

Tech Stack: Python, psutil, OS, Schedule, Time

🔗 **GitHub Repository:** github.com/username/-----

Automated Process Logger & Scheduling System

Description:

- Developed an automated process logging system using Python for periodic generation and management of system log files.
- Implemented scheduling automation to create timestamp-based logs at user-defined intervals.
- Designed a command-line utility for monitoring system activities and maintaining organized log records.
- Integrated file handling, directory management, and task scheduling for automated system surveillance operations.

Tech Stack:

Python, psutil, schedule, OS Module, Automation Scripting

Machine Learning Projects

Worked on multiple real-world Machine Learning projects and implemented complete industrial ML pipelines including data collection, preprocessing, feature engineering, model training, evaluation, visualization, and prediction deployment.

- **Titanic Survival Predictor** – Developed classification models using Decision Tree & Logistic Regression to predict passenger survival probability.
- **Diabetes Detection System** – Built a healthcare prediction model using medical datasets for intelligent diabetes classification.
- **Breast Cancer Detection** – Achieved high prediction accuracy using Logistic Regression & Support Vector Machine (SVM).
- **House Price Prediction System** – Implemented regression algorithms to estimate real-estate prices using multiple property features.
- **Ad Click Prediction System** – Predicted advertisement click probability using user behavior analytics and classification techniques.
- **Customer Segmentation System** – Applied K-Means Clustering for customer grouping and targeted marketing analysis.
- **Movie Recommendation Engine** – Developed recommendation logic using clustering and similarity-based machine learning techniques.
- **Loan Default Prediction System** – Used Random Forest & Gradient Boosting for financial risk analysis and loan repayment prediction.
- **Sentiment Analysis System** – Enhanced text sentiment classification accuracy using ensemble learning techniques like Bagging & Boosting.
- **Wine & Iris Classification Models** – Built multi-class classification systems using KNN, Decision Tree, and Random Forest algorithms.
- **Head Brain Analysis Case Study** – Applied regression and predictive analytics to study correlation patterns in structured datasets.
- **Industrial ML Pipeline Implementation** – Practically implemented end-to-end MLOps workflow including data preprocessing, model training, testing, evaluation, visualization, and prediction generation for multiple AI/ML projects.
- **Data Visualization & Analytics** – Performed Exploratory Data Analysis (EDA), statistical analysis, dashboard generation, and graphical reporting using real-world datasets.

Tech Stack: Python, Pandas, Scikit-learn, NumPy, Matplotlib

 **GitHub Repository:** github.com/username/-----

Deep Learning Projects

Real-Time Image Classification using CNN

Description:

- Developed a real-time image classification system using CNN and OpenCV for live webcam-based object recognition.
- Performed image preprocessing, normalization, and augmentation to improve model accuracy and performance.
- Designed and trained a Deep Learning model using TensorFlow/Keras with convolutional, pooling, and dense layers.
- Implemented real-time prediction visualization with live classification output on video frames.

Tech Stack:

Python, TensorFlow, Keras, OpenCV, NumPy, Matplotlib

🔗 **GitHub Repository:** github.com/username/-----

Real-time Emotion Detection (CNN + OpenCV)

Description: Developed a real-time facial emotion recognition system using Convolutional Neural Networks (CNNs) integrated with OpenCV for live video capture. The model successfully detects and classifies human emotions such as happy, sad, angry, surprised, and neutral from webcam input.

- Preprocessed facial images using grayscale conversion, resizing, and normalization for consistent model input.
- Designed and trained a CNN architecture with convolutional, pooling, dropout, and dense layers for robust emotion classification.
- Implemented Softmax activation to classify multiple emotion categories.
- Integrated OpenCV Haar Cascade & DNN face detectors to capture real-time faces from live webcam stream.
- Displayed emotion labels on video frames with bounding boxes for clear visualization.

Tech Stack: Python, TensorFlow, Keras, OpenCV, NumPy, Matplotlib

🔗 **GitHub Repository:** github.com/username/-----

AI-Based Financial Time Series Forecasting using LSTM

Description:

Developed an AI-based stock price forecasting system using LSTM networks on the Reliance stock dataset. Implemented data preprocessing, time-series sequence generation, and Deep Learning models to predict future stock prices based on historical market trends. Evaluated model performance using RMSE, MAE, and graphical comparison of actual vs predicted values.

Tech Stack:

Python, TensorFlow, Keras, Pandas, NumPy, Matplotlib, Scikit-learn

🔗 **GitHub Repository:** github.com/username/-----

Surface Crack Detection using CNN

Description:

Developed an AI-Based Surface Crack Detection System using Convolutional Neural Networks (CNN) to identify cracks on industrial surfaces from image datasets. Implemented image preprocessing, feature extraction, and binary classification techniques for accurate defect detection. Trained and evaluated the model using TensorFlow and Keras with visualization of prediction results and performance metrics.

Tech Stack:

Python, TensorFlow, Keras, OpenCV, NumPy, Matplotlib, Scikit-learn

🔗 **GitHub Repository:** github.com/username/-----

Text Sentiment Analysis using RNN/LSTM

Description: Built a Recurrent Neural Network (RNN) with LSTM layers to predict sentiment (positive/negative/neutral) from text data such as movie reviews and social media posts. The model effectively captured long-term dependencies in text for improved sentiment classification.

- Collected and preprocessed textual dataset with tokenization, stopword removal, padding, and embedding.
- Used Word Embeddings (Word2Vec/Glove/Embedding layer) to represent words in dense vector space.
- Designed an LSTM-based deep learning model capable of handling sequential dependencies in text.
- Implemented dropout layers to prevent overfitting and improve generalization.
- Trained the model with Adam optimizer & binary/multiclass cross-entropy loss.

Tech Stack: Python, TensorFlow, Keras, NLTK, NumPy, Matplotlib

🔗 **GitHub Repository:** github.com/username/-----

Generative AI Projects

Intelligent Document Question Answering System using RAG & LLMs

Description:

- Developed a RAG-based Intelligent Document Question Answering System using Large Language Models and FAISS vector database.
- Implemented PDF text extraction, chunking, semantic search, and embedding generation using Sentence Transformers.
- Integrated Ollama with Llama3 to generate context-aware answers from uploaded PDF documents.
- Designed an interactive web application using Streamlit for real-time document querying and response generation.

Tech Stack:

Python, Streamlit, FAISS, Sentence Transformers, Ollama, Llama3, PyPDF2, NumPy

🔗 **GitHub Repository:** github.com/username/-----

Marvellous SmarHire – AI Mock Interview Agent

Description:

- Developed an AI-powered Mock Interview System capable of conducting technical interviews and evaluating candidate answers intelligently.
- Integrated Large Language Models (LLMs) to generate interview questions, analyze responses, and provide detailed feedback with scoring.
- Implemented AI-based answer evaluation, performance analysis, and automated report generation for interview preparation.
- Applied concepts of Generative AI, Prompt Engineering, AI Agents, and conversational intelligence to simulate real interview environments.

Tech Stack:

Python, LLMs, Ollama, Llama3, Streamlit, Generative AI, Prompt Engineering

🔗 **GitHub Repository:** github.com/username/-----

Achievements

- Completed intensive training in Python Programming, Automation, Data Science, Machine Learning, Deep Learning, Generative AI, and Large Language Models at Marvellous Infosystems.
- Developed multiple real-world AI, ML, Automation, and GenAI-based projects with practical implementation experience.
- Built a strong GitHub portfolio showcasing hands-on projects in Computer Vision, NLP, Data Analytics, RAG, LLMs, and Intelligent Automation.
- Gained practical exposure to real-time problem solving, case studies, automation scripting, and AI-powered application development.
