PROFESSIONAL SUMMARY

MCA graduate with foundational Python programming experience, including Object-Oriented Programming, Data Structures & Algorithms, and Python web development using Django and Flask. Comfortable with relational and non-relational databases, Git-based version control, and building REST APIs. Hands-on experience with Python data analysis, machine learning, automation, and backend development, with a strong ability to learn new frameworks and technologies.

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, C, JavaScript, SQL

Python & Web: Django, Django REST Framework, Flask, REST APIs, Object-Oriented Programming

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Exploratory Data Analysis, Data Preprocessing, Statistical Analysis

Machine Learning: Scikit-learn, Logistic Regression, Decision Tree Classification, K-Nearest Neighbors, Multiple Linear Regression, Train/Test Split, Model Evaluation, Confusion Matrix, Classification Report

Databases: PostgreSQL, MySQL, MongoDB, SQLite

Automation & System Utilities: Psutil, Schedule, OS Module, File I/O, Hashlib MD5

Tools: Git, GitHub, VS Code, Postman, Maven, IntelliJ IDEA

Concepts: Data Structures & Algorithms, OOP, SDLC, Agile/Scrum, Problem Solving, Time Complexity, Database Optimization

Additional: HTML5, CSS, JavaScript, jQuery, Angular, TypeScript, RxJS, RabbitMQ, Kafka

PROFESSIONAL EXPERIENCE

Software Developer Intern

Feb 2026 – Jul 2026

SetTribe IT Solutions, Pune

- Developed and implemented application features using Java and Spring Boot, integrating APIs and databases to enhance application functionality.
- Worked on application development and database integration, contributing to improvements in system performance.
- Collaborated with the development team to write test cases, identify bugs, and resolve issues before releases.
- Participated in Agile sprint meetings and code reviews while using Git for version control.
- Investigated issues discovered during testing and documented implemented fixes to support reliable application delivery.

PYTHON PROJECTS

EduTrack – Student Management Portal

Python, Django, Django REST Framework, SQLite, Pandas, NumPy

- Built a Django REST Framework API to manage students, subjects, and results with CRUD operations across the core models.
- Added model-level validation to prevent marks from exceeding the maximum marks defined for a subject.
- Developed an analytics endpoint using Pandas and NumPy to calculate average, median, standard deviation, and pass rates for subject results.
- Built a student report-card endpoint that ranks students against their batch using Pandas grouping, aggregation, and sorting.
- Wrote a test suite covering CRUD operations, validation rules, and analytics calculations, with five tests passing.

MACHINE LEARNING PROJECTS

Titanic Survival Prediction

Python, Pandas, NumPy, Scikit-learn, Joblib

- Implemented data cleaning by handling missing values and converting categorical data into a format suitable for modeling.
- Developed a Logistic Regression classification model and evaluated predictions using accuracy score and confusion matrix.
- Used Joblib to save the trained model and load it later for making predictions on new data.

Advertising Sales Prediction

Python, Pandas, Matplotlib, Scikit-learn

- Performed exploratory data analysis using statistical summaries and visualizations to identify factors associated with sales.
- Split the dataset into training and testing sets and trained a multiple linear regression model using Scikit-learn.
- Evaluated model performance using Mean Squared Error, Root Mean Squared Error, and R-squared metrics.

PYTHON AUTOMATION PROJECTS

Automated Disk Sanitizer – Duplicate File Detection

Python, OS Module, Hashlib MD5, File I/O

- Developed a Python utility for duplicate file detection using recursive filesystem traversal and MD5 checksum hashing.
- Used binary file processing and content hashing to identify duplicate files across directories.
- Added an interactive cleanup option to retain one original file while removing duplicate instances.

Platform Surveillance System – Automated Resource Monitoring

Python, Psutil, Schedule, Automation

- Developed a Python utility to monitor CPU, RAM, disk, and network usage using Psutil.
- Implemented scheduled process scanning and diagnostic logging with process metadata including PID, memory usage, and CPU usage.
- Added exception handling for NoSuchProcess, AccessDenied, and ZombieProcess conditions to keep monitoring stable.
- Added configurable scheduling intervals for automated resource monitoring.

TECHNICAL STRENGTHS

- Strong Python programming foundation with practical experience in web development, data analysis, automation, and machine learning.
- Hands-on experience with data preprocessing, exploratory analysis, visualization, model training, and model evaluation.
- Strong analytical and problem-solving skills with experience in debugging, validation, testing, and data handling.
- Familiar with Git-based development, Agile/Scrum practices, REST APIs, databases, and collaborative software development.

EDUCATION

Master of Computer Applications (MCA)	2026
Dnyansagar Institute of Management and Research, Pune (SPPU)	7.32 CGPA
Bachelor of Computer Applications (BCA)	2024
C.T. Bora College, Shirur (SPPU)	73.34%
Higher Secondary Certificate (HSC)	2021
Maharashtra State Board	75%
Secondary School Certificate (SSC)	76%
Maharashtra State Board
